Apps > Fleet Management (Dispatcher)

https://www.spreenauten.com/radio-technology-applications/fleet-management/

To make your DMR Motorola radio infrastructure (radio, repeater etc.) manageable, we have developed an intuitive and individually adaptable fleet management and dispatcher software.

Our focus is on the administration of network devices in a company LAN. Whereby the radio cell (repeater & control technology) behaves similar to a router and the radio devices like mobile or stationary network devices (laptops, PCs etc.).

The use of the Spreenauten Fleet Management solution not only facilitates the administration and evaluation of the radio cell and the radios but also increases the communication security within the radio communication considerably.

Motorola Fleet Management features like:

> Filterable overview which radio is currently online and how it behaves
> Locking of lost radios
> Text messaging (also automated "Take me to your admin")
> Display of the load of the radio cell
> Evaluation of the complete radio system
> ... and many more

are already fully implemented and available as SAAS (Software as a Service) - we used the AWS cloud, location: Frankfurt am Main, Germany - or as locally installed software at your site.

Of course we are developing our radio technology software - including an innovative push-to-talk app and our heatmap application is constantly evolving and is continuously receiving feature requests from our business partners and customers.

We are highly interested in the individual integration into your communication software, ERP, machine control software and the associated automation of business processes - such as in the areas of maintenance, safety and logistics.

Features are developed quickly and unbureaucratically by our in-house IT department and are individually designed according to your wishes. Of course we work closely with

Motorola.

Our developers are looking forward to your questions about our Motorola Fleet Management Software - and of course also to inquiries about individual software development in the field of radio technology.

You can reach our support team around the clock at +49.(0)30.293.81.97-0 and of course also by e-mail at support@spreenauten.com

We would be pleased to discuss your project free of charge and without obligation at your premises or at our headquarters in Berlin.
